

Risk ID	Category / Element	Risk Short Title	Description	Desired Outcome	Current Situation	Proposed Strategy
C00251 □	M2 Project Organisation	Monitoring learning outcomes across diverse settings	The Arini Method pilot spans diverse EcoSocieties across different countries, cultures, and socioeconomic settings. Each location will implement the core values and strategies slightly differently, which is expected and even encouraged. There is a concern about the need to track learning outcomes in a way that respects local adaptations while ensuring meaningful evaluation of the pilot's impact. It's about capturing evidence of transformation, in children, parents, educators, and the wider community, without defaulting to rigid or reductionist testing methods.	Track success metrics in a way that reflects regional diversity What Could Go Wrong? Standard evaluation tools may misrepresent localized success	No localized success metrics published for each region	Customize evaluation tools with regional baselines and priorities
